## CONTENT MANAGEMENT SYSTEM

ayudaCMS is a content management system which offers the ability to website owners to manage the content of their website without the need for web development skills.

### ayudaCMS feature list

- easy-to-use web interface
- secure, password protected access, including a password reset facility, in case of forgotten password
- ability to implement any design in the ayudaCMS framework
- ayudaCMS's modular architecture allows additional components to be easily integrated
- ability to add, edit and delete pages
- ability to publish and unpublish page, including the ability to preview unpublished pages
- unlimited versioning of pages
- sitewide search facility, including search statistics
- pre-built page templates:
  - general content page (eg: for About us, Privacy policy etc.)
  - news pages
  - subscribe pages (eg: subscribe to e-news)
  - site membership pages (register, my details, export list of members etc.)
  - blog, including tags, comments, pingbacks
  - contact forms
  - faqs pages
- eCommerce features including
  - product management
  - online shop
  - secure checkout process
  - payment gateway integration
- payment receipts

- order management
- publish your news or blog posts as RSS feeds
- incorporated external RSS feeds into your site
- form builder tools:
  - support for common HTML form elements
  - field validation
  - integration of forms into the online shop
- google analytics code management
- search engine friendly URLs
- ability to easily manage page meta data for SEO purposes
- support for URL redirection; this allows you to make any URL go to a specific page on your website
- multi-level access permissions
- ability to move pages around the menu structure
- modular architecture supporting:
  - ability to extend existing page templates with new features or functionality
  - ability to define and integrate new custom page templates or features
- facebook login integration, let your visitors log in with their facebook accounts and drive traffic to your site
- “CAPTCHA” support for forms. CAPTCHAs avoid automatic completion of web forms by spammers by requiring the user to enter the jumbled word displayed as an image

### **Page templating explained**

Page templates are where the design and content integrate with functionality. Each page template represents the content, design and functionality of a particular type of content, eg News items, Frequently Asked Questions, a Contact form, etc. The integrated into the CMS so that new, or edited, content is automatically displayed with the required design,
